Subject: CFAC three week update

On July 13, 2018 DEQ received the most recent update from Carl Burnham of IRS Environmental regarding the quantity of Asbestos material removed from the CFAC site. A current cumulative total of 69,900 pounds of regulated asbestos waste has been removed from the facility (no increase since December 05, 2016). The waste disposal receipts for June indicate the removal of an additional 639,700 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 7,444,480 pounds. Structures included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, Compressor Building, Laboratory, Building 1, and Change House.

An asbestos project permit and demolition notification for Building 1 have been extended through August 31, 2018.
